Sample PDF for Python Data Extraction

This is a sample PDF document created for testing purposes. The document contains text, a hyperlink, and a table. It is designed to test the functionality of Python libraries for extracting text, links, images, and tables from PDFs.

[Visit Python's official websitei](#)

Sample Table:

Item	Quantity	Price
Apple	10	$5
Banana	8	$3
Orange	12	$6

This is the second page of the PDF. You can use this page to further extract information or analyze the document structure. The goal is to ensure that the Python extraction library is able to parse multi-page documents and retrieve the correct metadata.
